NETFLIX | Global Streaming Intelligence Suite – Regional Market Analysis

Report prepared and analytics conducted by Soham S. Amburle | 12 March 2026

The Regional Market Analysis Dashboard provides a detailed view of how a simulated global streaming platform performs across different geographic markets. Inspired by the analytics environment of companies such as Netflix, this dashboard focuses on understanding regional subscriber distribution, revenue generation, and viewer engagement patterns.

The dashboard was developed using Power BI and a synthetic dataset designed to simulate typical streaming platform analytics. Although the dataset contains approximately 2,394 records, it reflects the structure of an enterprise-level business intelligence system through a snowflake schema data model composed of fact tables and dimension tables.

The main objective of this dashboard is to help analysts and stakeholders answer important strategic questions such as:

- Which continents and regions have the largest subscriber base?
- Which geographic markets generate the highest revenue?
- How does subscription plan adoption vary across regions?
- Which markets demonstrate the highest viewer engagement through watch hours?
- How extensive is the global reach of the streaming platform?

By combining KPI indicators, regional comparison charts, and interactive filtering capabilities, the dashboard provides a clear and actionable perspective on global market performance.

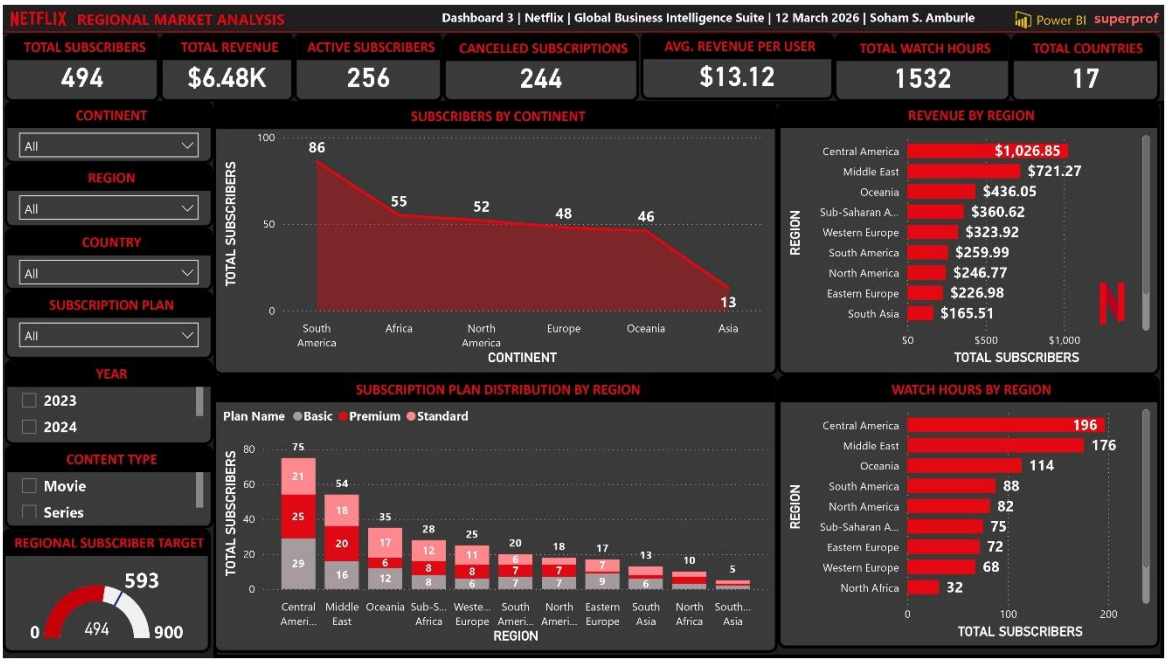

Fig 3.1 Regional Market Analysis

Dashboard Storyline

The dashboard follows a structured analytical flow that guides users from high-level platform metrics to deeper regional insights.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

The analysis begins with a KPI overview that establishes the overall scale of the platform's operations. These indicators provide a quick snapshot of subscriber numbers, revenue generation, engagement levels, and global reach.

After establishing this high-level perspective, the dashboard moves into regional comparisons, analyzing how different continents and regions contribute to subscriber growth and revenue generation.

The final section focuses on viewer engagement patterns and subscription plan distribution across regions, helping identify which markets demonstrate strong engagement and which subscription tiers dominate in different geographic locations.

This layered storytelling approach ensures that users can quickly understand the overall business landscape while also exploring regional performance in greater detail.

Dashboard Elements

The dashboard is composed of three primary analytical components:

- KPI Cards that summarize key platform metrics
- Interactive Slicers that allow users to filter analysis dynamically
- Visual Charts that compare regional performance across multiple dimensions

Together, these elements create an interactive environment for exploring regional streaming performance.

KPI Cards

Seven KPI cards provide a concise overview of the platform's regional footprint.

1. **Total Subscribers:** Displays the total number of users subscribed to the platform.
2. **Total Revenue:** Represents the total revenue generated through subscription plans.
3. **Active Subscribers:** Shows the number of currently active subscriptions.
4. **Cancelled Subscriptions:** Indicates the number of subscriptions that have been cancelled, helping track churn.
5. **Average Revenue Per User (ARPU):** Calculates the average revenue generated per subscriber.
6. **Total Watch Hours:** Represents the cumulative viewing time across the platform, indicating overall engagement levels.
7. **Total Countries:** Displays the number of countries represented in the dataset, reflecting the platform's global reach.

These KPIs provide a quick overview of market scale, financial performance, and engagement levels.

Slicers

Six slicers enable users to filter the dashboard across multiple analytical dimensions.

The slicers included in the dashboard are:

1. Continent
2. Region
3. Country
4. Subscription Plan
5. Year

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

6. Content Type

These filters allow analysts to dynamically explore regional performance across different geographic levels, subscription tiers, and content categories.

All visualizations in the dashboard respond interactively to these slicers, enabling flexible exploration of the data.

Main Visualizations

The dashboard includes four key visuals that highlight regional performance.

1. **Subscribers by Continent (Area Chart):** This visualization compares subscriber distribution across continents, helping identify which global regions contribute the most users.
2. **Revenue by Region (Clustered Bar Chart):** Displays revenue generated by different regions, allowing analysts to quickly identify high-performing markets.
3. **Subscription Plan Distribution by Region (Stacked Column Chart):** Shows how Basic, Standard, and Premium plans are distributed across regions, helping evaluate pricing strategy and plan adoption.
4. **Watch Hours by Region (Clustered Column Chart):** Highlights which regions generate the most viewer engagement based on total watch hours.

Together, these visuals provide a comprehensive view of regional subscriber scale, revenue performance, and engagement patterns.

Business Value

This dashboard provides several key analytical benefits.

It allows stakeholders to understand how different geographic markets contribute to the platform's overall performance. By comparing subscriber counts, revenue levels, and watch hours across regions, decision-makers can identify high-growth markets and potential expansion opportunities.

The dashboard also reveals regional subscription plan preferences, which can inform pricing strategies and product offerings in specific markets.

Additionally, engagement metrics such as watch hours provide insight into viewer activity levels across different regions, helping the organization better understand user behavior patterns globally.

Overall, the dashboard serves as a regional intelligence tool that helps stakeholders evaluate market performance and guide strategic expansion decisions.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
  - Fact Tables
    - Fact_WatchHistory
    - Fact_Subscriptions
    - Fact_Ratings
  - Dimension Tables
    - Dim_Users

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

- Dim_Content
- Dim_Time
- Dim_Geography
- Dim_Genre
- Dim_Language
- Dim_Device
- Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
