NETFLIX | Global Streaming Intelligence Suite – Executive Overview

Report prepared and analytics conducted by Soham S. Amburle | 25 – 28 March 2026

The Executive Overview Dashboard represents the highest level of abstraction within the Global Streaming Intelligence Suite. It is designed as a decision-support system for executives, providing a consolidated and strategic view of platform performance across all major business dimensions.

Built using Power BI on a synthetic dataset of approximately 2,394 records, this dashboard integrates insights from 14 underlying analytical dashboards, making it the central intelligence layer of the entire solution.

Purpose and Positioning

- Unlike other dashboards in the suite that focus on specific domains, this dashboard serves as:
- A summary layer of all analytics
- A navigation gateway to detailed dashboards
- A decision-making tool for leadership

It is intentionally designed to be minimal, high-impact, and insight-driven, avoiding unnecessary complexity.

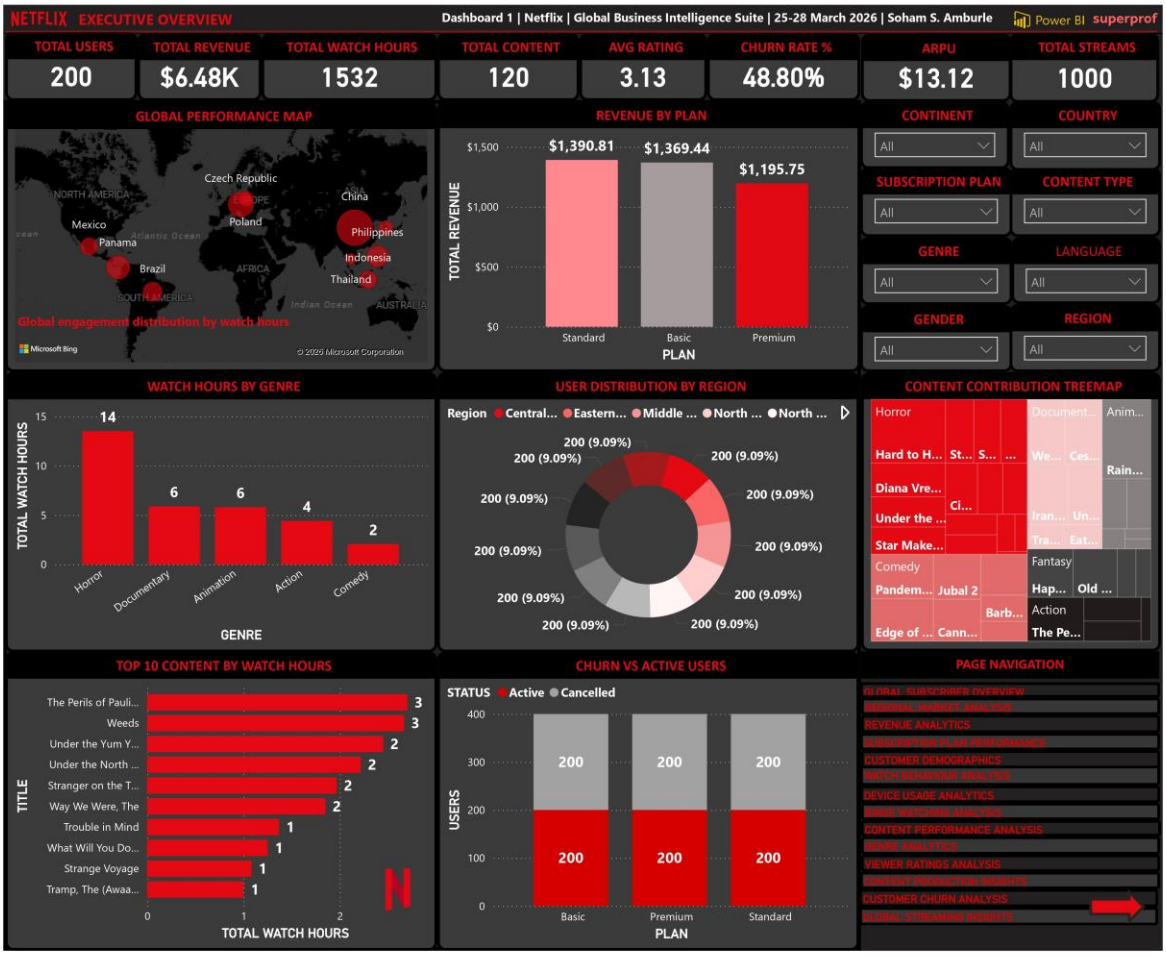

Fig 1.1 Executive Overview

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

Business Questions Addressed

The dashboard enables executives to quickly answer:

- What is the current scale and health of the platform?
- How are revenue and engagement trending globally?
- Which content and genres drive the most value?
- How is the user base distributed geographically?
- What are the key churn and retention signals?

Analytical Flow

The dashboard follows a structured flow aligned with executive decision-making.

KPI Cards

The top layer presents eight KPIs that summarize:

- Platform scale (Users, Content)
- Engagement (Watch Hours, Streams)
- Monetization (Revenue, ARPU)
- Quality (Average Rating)
- Retention (Churn Rate)

This allows leadership to grasp the platform's overall performance within seconds.

Strategic Visual Layer

The dashboard includes seven visuals, each representing a key business dimension:

- Geography: Global performance map
- Revenue: Revenue by subscription plan
- Content Consumption: Watch hours by genre
- User Distribution: Regional user breakdown
- Content Performance: Top titles by engagement
- Retention: Active vs churned users
- Content Portfolio: Treemap of genre and title contribution

Together, these visuals provide a multi-dimensional view of platform performance.

Interactivity Layer

Slicers enable cross-filtering across:

- Geography (continent, country, region)
- Content (type, genre, language)
- Users (gender)
- Monetization (subscription plan)

This ensures flexible and targeted analysis without overwhelming the user.

Integration with Full Dashboard Suite

This dashboard is tightly integrated with the following 14 dashboards:

1. Global Subscriber Overview

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

2. Regional Market Analysis
3. Revenue Analytics
4. Subscription Plan Performance
5. Customer Demographics
6. Watch Behaviour Analysis
7. Device Usage Analytics
8. Binge Watching Analysis
9. Content Performance Analysis
10. Genre Analytics
11. Viewer Ratings Analysis
12. Content Production Insights
13. Customer Churn Analysis
14. Global Streaming Insights

Each of these dashboards provides deep-dive analysis, while the Executive Overview consolidates their outputs into a single strategic view.

Business Impact

The Executive Overview Dashboard delivers:

- A single source of truth for leadership
- Faster and more confident decision-making
- Clear visibility into growth drivers and risks
- Alignment between data insights and business strategy
- Improved accessibility of analytics for non-technical stakeholders

Conclusion

The Executive Overview Dashboard completes the Global Streaming Intelligence Suite by providing a comprehensive, high-level perspective of the entire streaming platform.

It transforms complex, multi-dimensional data into clear, actionable insights, making it an essential tool for strategic planning and executive decision-making.
