NETFLIX | Global Streaming Intelligence Suite – Customer Demographics

Report prepared and analytics conducted by Soham S. Amburle | 15 March 2026

The Customer Demographics Dashboard provides a structured and interactive view of the user base within a simulated global streaming platform inspired by Netflix. Built using Power BI and a synthetic dataset of approximately 2,394 records, the dashboard leverages a snowflake schema data model to replicate real-world streaming analytics scenarios.

This dashboard focuses on understanding the composition of users across demographic and geographic dimensions. It answers key analytical questions such as:

- What is the overall size of the user base?
- How are users distributed across age groups and gender?
- Which countries and regions have the highest user concentration?
- What subscription plans are preferred by users?
- How does the demographic composition vary across segments?

Through a combination of KPI indicators, visual charts, and interactive slicers, the dashboard enables efficient exploration of user demographics.

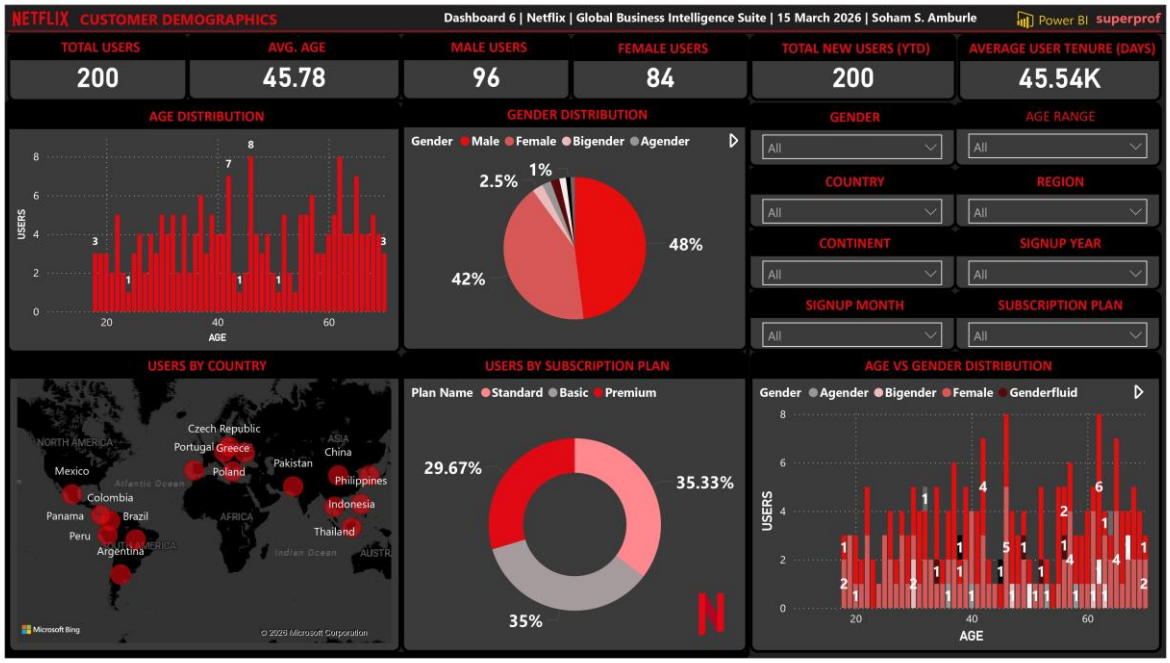

Fig 6.1 Customer Demographics

Dashboard Storyline

The dashboard follows a structured analytical flow beginning with a high-level overview and progressing toward deeper demographic insights.

The analysis begins with KPI indicators that summarize the overall user base. These metrics provide immediate visibility into total users, average age, gender distribution, and user growth.

The dashboard then shifts focus to demographic distribution. Visualizations such as age distribution and gender breakdown allow users to understand how the population is segmented.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

Next, geographic analysis is introduced through a map visualization that highlights user distribution across countries, enabling identification of key markets.

Finally, the dashboard explores subscription preferences, helping stakeholders understand how different user segments engage with subscription plans.

This layered approach ensures that users can quickly grasp the overall demographic picture while also exploring detailed insights through interactive filters.

Dashboard Elements

The dashboard consists of three main analytical components:

- KPI Cards for high-level metrics
- Interactive Slicers for filtering
- Visual Charts for demographic analysis

These components work together to create an intuitive analytical experience.

KPI Cards

Six KPI cards summarize key demographic metrics:

1. **Total Users**: Represents the total number of unique users.
2. **Average Age**: Indicates the average age of users.
3. **Male Users**: Number of male users on the platform.
4. **Female Users**: Number of female users on the platform.
5. **Total New Users (YTD)**: Users who joined up to the current date.
6. **Average User Tenure (Days)**: Average duration since user signup.

These KPIs provide a quick snapshot of user composition and growth.

Slicers

Eight slicers allow dynamic filtering across dimensions:

1. Gender
2. Age
3. Country
4. Region
5. Continent
6. Signup Year
7. Signup Month
8. Subscription Plan

These filters enable users to analyze demographics across different segments and regions.

Main Visualizations

The dashboard includes five primary visuals:

1. **Age Distribution (Clustered Column Chart)**: Displays user distribution across age groups.
2. **Gender Distribution (Pie Chart)**: Shows the proportion of male and female users.
3. **Users by Country (Map)**: Highlights geographic distribution of users.
4. **Users by Subscription Plan (Donut Chart)**: Shows plan preference among users.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

5. **Age vs Gender Distribution (Stacked Column Chart)**: Combines age groups with gender distribution for deeper demographic analysis.

These visuals collectively provide a clear understanding of user segmentation.

Business Value

This dashboard delivers key analytical benefits:

- Enables understanding of user demographics across multiple dimensions
- Supports segmentation for targeted marketing strategies
- Identifies high-growth regions and user groups
- Helps align subscription offerings with user preferences
- Provides a foundation for user-centric decision-making

Overall, the dashboard acts as a demographic intelligence layer within the broader streaming analytics ecosystem.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
    - Fact Tables
        - Fact_WatchHistory
        - Fact_Subscriptions
        - Fact_Ratings
    - Dimension Tables
        - Dim_Users
        - Dim_Content
        - Dim_Time
        - Dim_Geography
        - Dim_Genre
        - Dim_Language
        - Dim_Device
        - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
