NETFLIX | Global Streaming Intelligence Suite – Global Subscriber Overview

Report prepared and analytics conducted by Soham S. Amburle | 11 March 2026

The Global Subscriber Overview Dashboard provides a clear picture of how subscribers are distributed across a simulated global streaming platform inspired by Netflix. The goal of this dashboard is to help stakeholders understand the scale of the subscriber base, geographic distribution of users, and the adoption of different subscription plans.

The dashboard is built in Power BI using a synthetic dataset designed to replicate real-world streaming analytics. Although the dataset is relatively small (2,394 records), it mirrors the structure of enterprise-level BI systems through a snowflake schema data model consisting of fact tables and dimension tables.

This dashboard focuses on answering important operational questions such as:

- Where are most subscribers located globally?
- How is the subscriber base distributed across continents and regions?
- Which subscription plans are most widely adopted?
- What proportion of subscriptions are active versus cancelled?

By combining high-level KPIs, geographic analysis, and interactive filtering, the dashboard provides a concise view of global subscriber patterns.

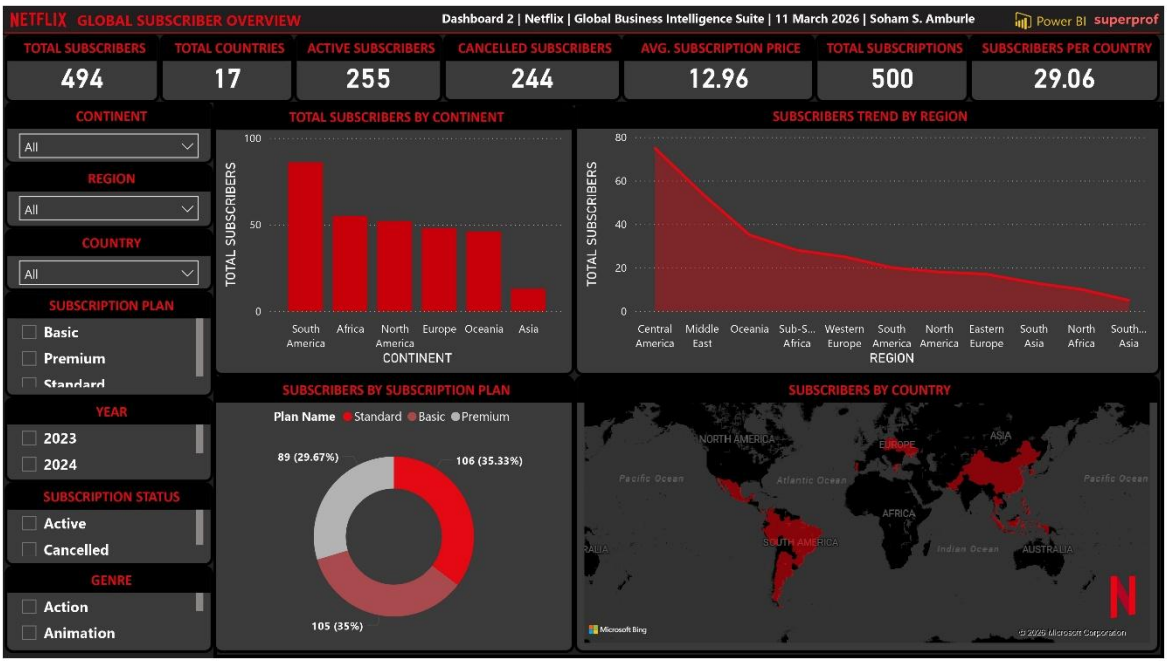

Fig 2.1 Global Subscriber Overview

Dashboard Storyline

The dashboard follows a logical analytical flow that guides users from a high-level overview to more detailed geographic insights.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

First, the dashboard establishes the overall scale of the subscriber base through KPI indicators. These metrics provide a quick understanding of the number of subscribers, subscription status distribution, and pricing insights.

Next, the analysis shifts toward geographic distribution, showing how subscribers are spread across continents, regions, and countries. This helps identify which markets contribute the most to the platform's user base.

Finally, the dashboard explores subscription plan adoption, allowing users to see how different pricing tiers are distributed across the subscriber population.

This layered storytelling structure ensures that users can quickly grasp the big picture while still having the flexibility to explore deeper insights through interactive filters.

Dashboard Elements

The dashboard consists of three primary components:

- KPI Cards that summarize key subscriber metrics
- Slicers that allow users to dynamically filter the analysis
- Visual Charts that present geographic and subscription insights

Together, these elements create an interactive and easy-to-understand analytical environment.

KPI Cards

Seven KPI cards provide a quick snapshot of the subscriber ecosystem.

1. **Total Subscribers:** Shows the total number of unique users who have a subscription on the platform.
2. **Total Countries:** Displays the number of countries represented in the subscriber dataset, giving a quick sense of the platform's global reach.
3. **Active Subscribers:** Represents subscribers who currently have an active subscription.
4. **Cancelled Subscribers:** Shows the number of subscriptions that have been cancelled, helping track churn levels.
5. **Average Subscription Price:** Displays the average monthly price across subscription plans in the dataset.
6. **Total Subscriptions:** Represents the total number of subscription records, including both active and cancelled subscriptions.
7. **Subscribers per Country:** Provides an average view of how subscribers are distributed across countries.

Together, these KPIs help users quickly assess platform scale, subscriber distribution, and subscription status.

Slicers

Seven slicers allow users to filter the dashboard dynamically across multiple dimensions.

The slicers included in the dashboard are:

1. Continent
2. Region
3. Country
4. Subscription Plan

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

5. Year
6. Subscription Status
7. Genre

These filters allow analysts to explore subscriber patterns across different geographic levels, subscription tiers, and content categories. All visuals respond interactively to these slicers, enabling flexible exploration of the data.

Main Visualizations

The dashboard contains four key visuals that provide insights into subscriber distribution.

1. **Subscribers by Continent (Clustered Column Chart):** This chart compares subscriber counts across continents, helping identify which global regions contribute the largest portion of the subscriber base.
2. **Subscribers by Country (Filled Map Visualization):** The geographic map highlights subscriber distribution at the country level. This visual makes it easy to identify key markets and observe the global spread of subscribers.
3. **Subscribers by Subscription Plan (Donut Chart):** This visualization shows how subscribers are distributed across different subscription plans. It helps evaluate the popularity of various pricing tiers.
4. **Subscribers by Region (Area Chart):** The area chart presents subscriber distribution across regions, offering a slightly more granular geographic perspective compared to the continent-level view.

Together, these visuals provide a clear and intuitive picture of how subscribers are distributed globally and across subscription tiers.

Business Value

This dashboard provides several important analytical benefits.

It allows stakeholders to quickly understand the scale of the subscriber base and how it is distributed globally. By examining subscriber distribution across continents, regions, and countries, decision-makers can identify which markets show strong platform adoption.

The dashboard also helps evaluate subscription plan popularity, which can inform pricing strategies and product positioning.

Additionally, the ability to filter by geographic and subscription dimensions enables analysts to explore subscriber behavior across multiple perspectives.

Overall, the dashboard serves as a concise subscriber intelligence view, providing useful insights for understanding platform reach and market distribution

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
    - Fact Tables
        - Fact_WatchHistory

        - Fact_Subscriptions
        - Fact_Ratings
    - Dimension Tables
        - Dim_Users
        - Dim_Content
        - Dim_Time
        - Dim_Geography
        - Dim_Genre
        - Dim_Language
        - Dim_Device
        - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
