NETFLIX | Global Streaming Intelligence Suite – Subscription Plan Performance

Report prepared and analytics conducted by Soham S. Amburle | 14 March 2026

The Subscription Plan Performance Dashboard provides a clear and interactive view of how subscription plans are performing within a simulated global streaming platform inspired by Netflix. The dashboard is built in Power BI using a synthetic dataset of 2,394 records, designed to replicate real-world streaming analytics through a snowflake schema data model with fact and dimension tables.

This dashboard answers operational questions such as:

- How many subscribers are active versus cancelled?
- How is revenue distributed across subscription plans?
- Which plans are most popular among users?
- How are subscribers distributed geographically?
- What is the average subscription price?

Through KPI cards, maps, charts, and interactive slicers, the dashboard allows analysts and executives to explore subscription performance quickly and efficiently.

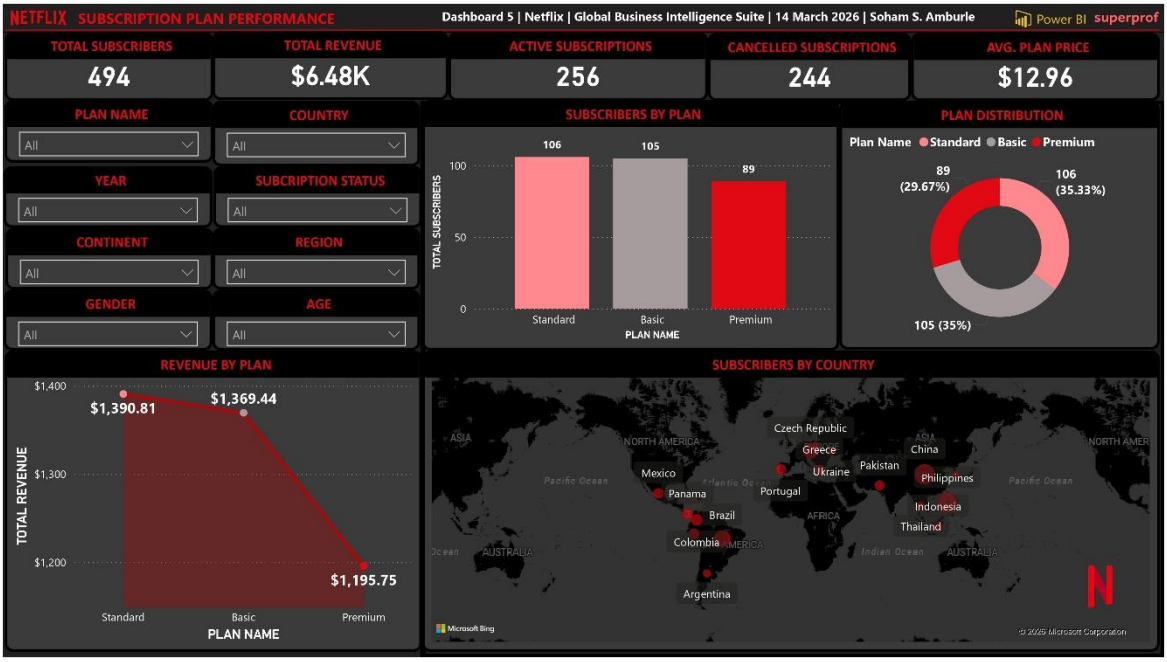

Fig 5.1 Subscription Plan Performance

Dashboard Storyline

The dashboard follows a logical analytical flow that guides users from a high-level overview toward deeper insights into subscription adoption and revenue distribution.

First, the dashboard establishes the overall scale of subscriptions through a set of KPI indicators. These metrics provide an immediate snapshot of the platform's health, including total subscribers, active subscriptions, and total revenue contribution.

Next, the analysis focuses on subscription plan performance. This section helps stakeholders understand how different pricing tiers contribute to subscriber counts and revenue.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

Finally, the dashboard shifts toward geographic distribution. By analyzing subscriptions and revenue across countries and regions, users can identify which markets generate the largest share of subscribers and revenue and where potential growth opportunities may exist.

This layered analytical structure ensures that users can quickly understand the big picture while also having the flexibility to explore deeper insights through interactive filters.

Dashboard Elements

The dashboard is composed of three primary analytical components:

- KPI Cards that summarize core subscription metrics
- Interactive Slicers that allow dynamic filtering
- Visual Charts that display subscription and revenue distribution

Together, these elements create an intuitive and interactive analytical environment for exploring subscription plan performance.

KPI Cards

Five KPI cards provide a quick overview of key subscription metrics:

1. **Total Subscribers**: Shows the total number of unique users subscribed to the platform.
2. **Total Active Subscriptions**: Represents the number of currently active subscription records.
3. **Cancelled Subscriptions**: Indicates the number of subscriptions that have been cancelled.
4. **Total Revenue**: Displays the total monthly revenue generated from all subscriptions.
5. **Average Plan Price**: Highlights the average subscription price across all tiers.

These KPIs allow users to quickly assess the scale, status, and financial impact of the platform's subscription ecosystem.

Slicers

Eight slicers allow users to dynamically filter the dashboard across multiple dimensions:

1. Continent
2. Region
3. Country
4. Subscription Plan
5. Year
6. Gender
7. Age
8. Subscription Status

These filters allow analysts to examine subscription patterns across geographic regions, user demographics, and plan types. All visuals respond interactively to these slicers, enabling flexible data exploration.

Main Visualizations

The dashboard contains four main visuals that present subscription insights:

1. **Subscribers by Plan (Clustered Column Chart):** Shows the total number of subscribers for each subscription plan. This visual helps evaluate the popularity of each pricing tier.
2. **Revenue by Plan (Area Chart):** Displays revenue contributions of each plan, highlighting which tiers generate the most revenue.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

3. **Plan Distribution (Donut Chart):** Illustrates the proportion of subscribers across different subscription plans for a quick comparative view.
4. **Subscribers by Country (Map):** Visualizes the geographic distribution of subscribers, helping identify key markets and regions with high adoption.

Together, these visuals provide a clear and intuitive understanding of how subscriptions and revenue are distributed across plans and geography.

Business Value

This dashboard provides several valuable analytical benefits:

- Allows stakeholders to evaluate overall subscription performance and revenue contribution per plan.
- Identifies popular plans and pricing tiers.
- Monitors active versus cancelled subscriptions to understand churn patterns.
- Highlights geographic adoption patterns, enabling targeted marketing and expansion strategies.
- Supports quick decision-making through interactive filtering across multiple dimensions.

Overall, the dashboard serves as a concise subscription intelligence view, providing actionable insights into subscription plan adoption and revenue generation across a global streaming platform.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
  - Fact Tables
    - Fact_WatchHistory
    - Fact_Subscriptions
    - Fact_Ratings
  - Dimension Tables
    - Dim_Users
    - Dim_Content
    - Dim_Time
    - Dim_Geography
    - Dim_Genre
    - Dim_Language
    - Dim_Device
    - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
