NETFLIX | Global Streaming Intelligence Suite – Binge Watching Analysis

Report prepared and analytics conducted by Soham S. Amburle | 18 March 2026

The Binge Watching Analysis Dashboard provides a comprehensive view of user engagement patterns by focusing on binge-watching behavior within a simulated global streaming platform inspired by Netflix. The dashboard is built in Power BI using a synthetic dataset of approximately 2,394 records, structured using a snowflake schema data model.

This dashboard analyzes how users consume content over extended viewing sessions and helps answer key behavioral questions, including:

- What proportion of sessions qualify as binge watching?
- How frequently do users engage in long viewing sessions?
- Which devices and genres contribute most to binge behavior?
- How does binge watching differ across content types?
- What is the average engagement level per session?

Through KPI indicators, interactive slicers, and visual charts, the dashboard enables users to explore viewing patterns and engagement levels effectively.

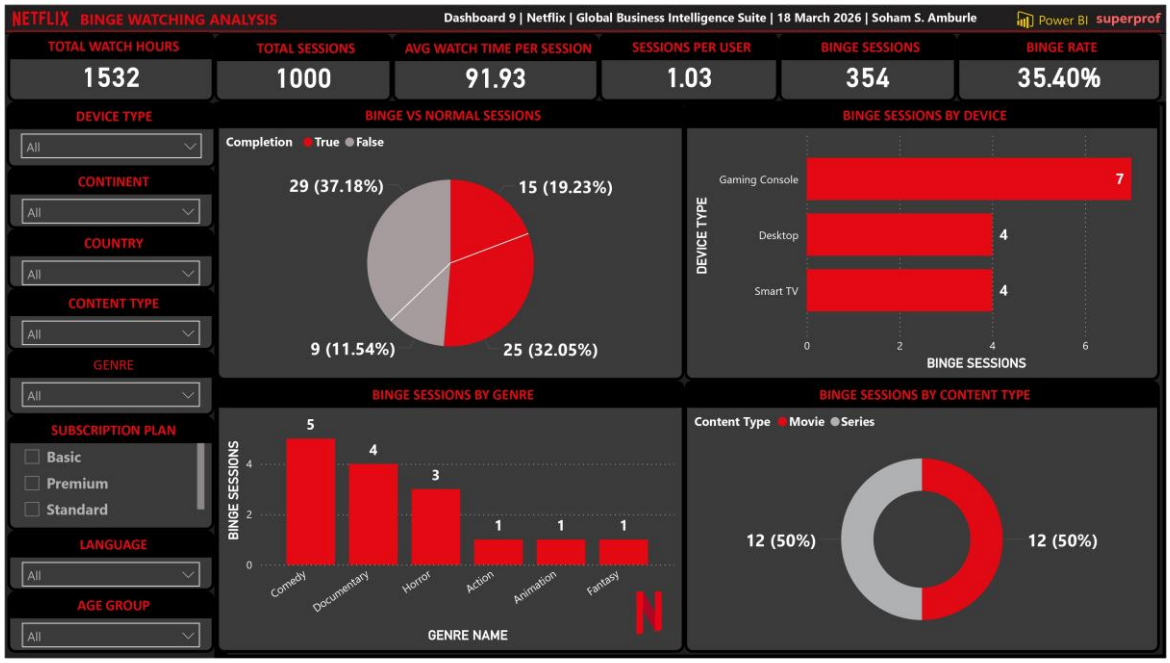

Fig 9.1 Binge Watching Analysis

Dashboard Storyline

The dashboard follows a structured analytical flow, beginning with a high-level overview of engagement metrics and progressing toward deeper insights into binge behavior.

The first section presents KPI cards that summarize overall platform activity, including total watch hours, total sessions, and engagement intensity. These metrics provide an immediate snapshot of viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

The second section focuses on distinguishing binge sessions from normal sessions. This allows stakeholders to understand how frequently users engage in extended viewing.

The final section analyzes binge behavior across devices, genres, and content types. This helps identify key drivers of binge watching and highlights areas where user engagement is highest.

This layered analytical structure ensures clarity while allowing flexible exploration through interactive filters.

Dashboard Elements

The dashboard is composed of three key components:

- KPI Cards
- Interactive Slicers
- Visual Charts

These elements work together to create an intuitive and interactive analytical experience.

KPI Cards

Six KPI cards summarize binge-watching metrics:

1. **Total Watch Hours**: Total viewing time across all sessions.
2. **Total Sessions**: Total number of streaming sessions.
3. **Average Watch Time per Session**: Average duration of each viewing session.
4. **Sessions per User**: Average number of sessions per user.
5. **Binge Sessions**: Number of sessions exceeding the binge threshold.
6. **Binge Rate (%)**: Percentage of sessions classified as binge watching.

These KPIs provide a quick understanding of engagement intensity and viewing patterns.

Slicers

Eight slicers enable dynamic filtering:

1. Device Type
2. Continent
3. Country
4. Content Type
5. Genre
6. Subscription Plan
7. Language
8. Age Group

These filters allow users to explore binge behavior across different user segments, content categories, and geographic regions.

Main Visualizations

The dashboard includes four key visuals:

1. **Binge vs Normal Sessions (Donut Chart)**: Displays the proportion of binge sessions compared to normal sessions.
2. **Binge Sessions by Device (Bar Chart)**: Shows which devices contribute most to binge watching.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

3. **Binge Sessions by Genre (Bar Chart)**: Highlights genres that drive extended viewing sessions.
4. **Binge Sessions by Content Type (Donut Chart)**: Compares binge behavior between movies and series.

Together, these visuals provide a comprehensive view of how, where, and why binge watching occurs.

Business Value

This dashboard provides several analytical benefits:

- Identifies patterns of extended viewing behavior
- Helps understand user engagement intensity
- Highlights devices and content types driving binge watching
- Supports content strategy and recommendation optimization
- Enables targeted engagement strategies based on user behavior

Overall, the dashboard serves as a behavioral analytics layer, offering insights into how users consume content on a streaming platform.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
  - Fact Tables
    - Fact_WatchHistory
    - Fact_Subscriptions
    - Fact_Ratings
  - Dimension Tables
    - Dim_Users
    - Dim_Content
    - Dim_Time
    - Dim_Geography
    - Dim_Genre
    - Dim_Language
    - Dim_Device
    - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
