NETFLIX | Global Streaming Intelligence Suite – Content Production Insights

Report prepared and analytics conducted by Soham S. Amburle | 22 March 2026

The Content Production Insights Dashboard provides a detailed and interactive analysis of content creation patterns within a simulated global streaming platform inspired by Netflix. Built using Power BI and a synthetic dataset of approximately 2,394 records, the dashboard leverages a snowflake schema data model to replicate real-world streaming analytics.

This dashboard is designed to answer key business questions such as:

- How has content production evolved over time?
- Which countries contribute the most to content production?
- What genres dominate the content catalog?
- How is content distributed across languages?
- What is the proportion of movies versus series?

Through KPI indicators, maps, charts, and interactive slicers, the dashboard enables both executives and analysts to explore production trends effectively.

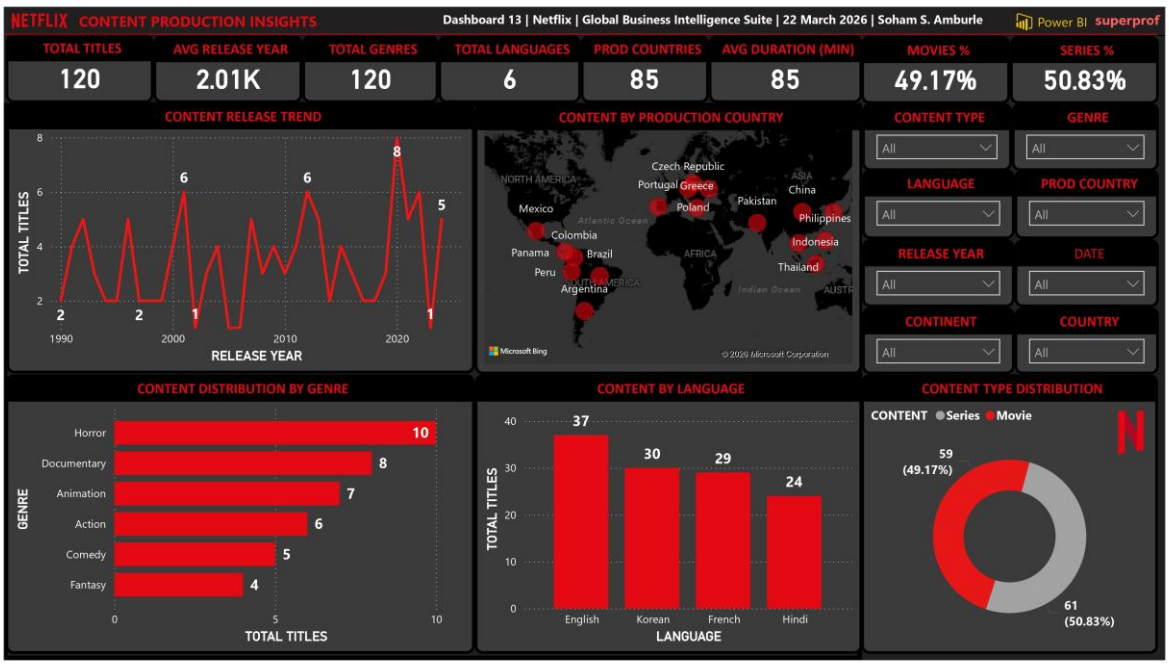

Fig 12.1 Content Production Insights

Dashboard Storyline

The dashboard follows a structured analytical flow from overall catalog metrics to deeper insights into production distribution.

The first section presents KPI cards that summarize the overall scale and diversity of the content catalog, including total titles, production countries, and content mix.

The second section focuses on production trends over time, allowing users to understand how content creation has evolved across years.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

The third section highlights geographic distribution, showing which countries contribute the most content to the platform.

The final section explores catalog composition, including genre distribution, language spread, and content type mix.

This layered approach ensures both high-level overview and detailed exploration.

Dashboard Elements

The dashboard consists of three primary components:

- KPI Cards for summary metrics
- Interactive Slicers for filtering
- Visual Charts for production analysis

These elements create an intuitive and interactive analytical environment.

KPI Cards

Eight KPI cards provide a high-level overview of content production:

1. **Total Titles**: Total number of content items in the catalog.
2. **Avg Release Year**: Average release year indicating content recency.
3. **Total Genres**: Number of distinct genres available.
4. **Total Languages**: Number of languages represented.
5. **Prod Countries**: Number of production countries.
6. **Avg Duration (Min)**: Average content duration.
7. **Movies %**: Percentage of movies in the catalog.
8. **Series %**: Percentage of series in the catalog.

These KPIs provide insights into catalog scale, diversity, and structure.

Slicers

Eight slicers allow dynamic filtering:

1. Content Type
2. Genre
3. Language
4. Production Country
5. Release Year
6. Date (Year/Month)
7. Continent
8. Country

These slicers enable analysis across content attributes, geography, and time.

Main Visualizations

The dashboard includes five primary visuals:

1. **Content Release Trend (Line Chart):** Shows how content production has evolved over time.
2. **Content by Production Country (Map):** Visualizes global distribution of content production.
3. **Content Distribution by Genre (Bar Chart):** Highlights dominant genres in the catalog.
4. **Content by Language (Column Chart):** Shows language diversity and distribution.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

5. **Content Type Distribution (Donut Chart):** Displays the proportion of movies vs series.

These visuals provide a clear understanding of production trends, geographic spread, and catalog composition.

Business Value

This dashboard delivers several key analytical benefits:

- Enables analysis of content production growth and trends
- Identifies key content-producing countries
- Highlights catalog diversity across genres and languages
- Supports strategic planning for content investment
- Helps optimize content mix between movies and series

Overall, the dashboard serves as a content production intelligence tool, supporting data-driven decisions for platform growth and content strategy.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
    - Fact Tables
        - Fact_WatchHistory
        - Fact_Subscriptions
        - Fact_Ratings
    - Dimension Tables
        - Dim_Users
        - Dim_Content
        - Dim_Time
        - Dim_Geography
        - Dim_Genre
        - Dim_Language
        - Dim_Device
        - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
